WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Frame: 20 x 20 x 2 square tube, 572 wide x 1,063 tall outside, with a mid rail. Weld square; diagonals equal within 2 mm.

Mesh: the same welded mesh, clamped or welded on the front face.

Hinges: two weld-on lift-off hinges on the left, 120 mm in from the top and bottom; the fixed leaves weld to the left front strip frame.

Handle: bent 15 x 12 mm bar, 140 mm grip, near the right edge at 905 mm up.

Tongue: an arm off the right-hand post and a 6 mm plate reaching over the lock rod, with a 14 mm hole centred on the rod.

Fit: the gate closes in the opening between 380 and 1,451 mm up; the lower 320 mm is the fixed lower front panel.

Opens outward to the left, about 105 degrees.

Check: swings without touching the folded rail extension; the tongue hole drops over the rod top without forcing.

PotPress front gate: making sketch
