WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Two UPN 140 channels 479 mm, webs 104 mm apart, flanges out. Deck 479 x 440 x 6 mm welded on top; jack pad 200 x 104 x 20 mm between the webs at the bottom, in the middle (the ram pushes here).

Sleeves: four 10 mm plates each, 121 x 121 mm outside, 150 mm tall, welded round a real upright wrapped in 0.5 mm shim, then slid off. Weld to the channel ends with the uprights 600 mm apart in a jig, sleeve bottom 20 mm below the channels.

Spring lugs: 30 x 160 x 8 mm under the bottom flanges at 190 mm each side, 12 mm hole. Rails: four 30 x 15 mm bars 510 mm long, at 60 and 170 mm each side of the middle, from 290 mm in front of the middle to 220 mm behind; end stop 400 x 15 x 40 mm across the back.

Extension: four 30 x 15 bars 335 mm on two weld-on barrel hinges under the rail ends, with 20 x 30 mm stop lugs; a 12 mm bright steel tipping pin sticks out 67 mm at the far end of each outer bar.

Check: slides the full 110 mm on two uprights in a jig; the extension, swung out, is level with the rails within 1 mm.
