BUILD PLAN SKETCH, PLAN NOT YET BUILT

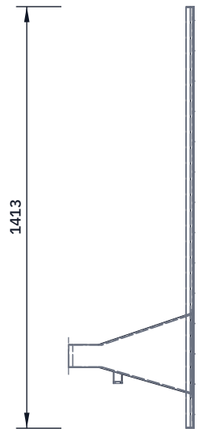

PotPress · github.com/BoujeeEnjinia1701/potpress

REV	DESCRIPTION	DATE	BY
P1	First issue	2026-09-30	AC
P2	Pump slot lengthened; fixed inner shield added	2026-10-02	AC
P3	Guard fixes: 6.35 mm mesh, plates and covers	2026-10-03	AC
P4	Frame 22 mm taller for the larger molds (DDR-006)	2026-10-23	AC
P5	Panel corners stop at the next frame (kit 1.9 fit check)	2026-10-24	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Seven panels, mesh on a welded frame of 25 x 25 x 3 angle: sides 607 (right) and 675 (left) x 1,413; rear 884 x 1,413 in 12.7 x 1.6 mesh.
Front strips 152 (left) and 180 (right) x 1,413, lower front 580 x 320 and roof 940 x 675 (cut-out round the top beam) in 6.35 x 0.9 mesh.
Corners: rear, left strip and right side stop at the next frame's leg.
Every 8th wire drawn.
Pump slot (right side): 30 x 272 mm, 174 to 446 mm up, centred 218 mm in front of the middle, framed with 3 mm strip. Shield behind it:
2 mm sheet tunnel 30 mm wide inside to 3 mm off the jack body, roof and floor 25 mm clear of the handle at its stroke ends; 3 mm flange (4 x M8 through the slot frame); 30 x 6 mm stay to the base beam.
Front right strip: 44 mm square hole at the release shaft and 40 mm square at the pin cable, each closed behind the mesh by a 3 mm plate (6 x M5): 55 x 60 with a 20 mm hole, 50 x 50 with a 10 mm grommet.
Top beam: two 3 mm plates 320 x 180, 100 mm to 420 mm each side of the middle, over the gap and the upright tops; 4 x M8 each.
Crank bracket: 2 mm sheet 170 x 285 front and back, 4 x M6 each.
Fix mesh under bolted flat strips, or grind the zinc off first.
Eight 40 x 6 standoffs to the beam webs; M8 at panel corners.
Check: flat within 3 mm; no panel over about 10 kg.
